

iO CLEAN

SCREEN CLEANER USER MANUAL

SIMPLE, FAST & EASY USE

4-Step Cleaning Process

1

Prepare the Bottle: Open the bottle cap and securely screw in the provided sprayer attachment. Ensure it is tightly fastened to prevent leaks.

2

Apply to Cloth: Spray the iO CLEAN solution directly onto the included microfiber cloth.

Note: Never spray the liquid directly onto your electronic device's screen.

3

Clean the Screen: Gently wipe the screen with the dampened side of the microfiber cloth. Use smooth, circular or side-to-side motions without applying excessive pressure.

4

Buff to a Shine: Flip the microfiber cloth over to the dry side. Buff the screen dry to remove any remaining moisture and eliminate streaks for a crystal-clear finish.

Troubleshooting & Best Practices

Experiencing Streaks or Smudges?

- **Device Temperature:** Always turn off your monitor or device and let it cool down before cleaning. Cleaning a warm screen causes the solution to evaporate too quickly, leading to streaks.

- **Cloth Quality:** Always use the dedicated microfiber cloth provided in the kit. Using paper towels, tissues, or rough fabrics can scratch your screen and leave lint or residue.
- **Excessive Solution:** Do not over-saturate the cloth. 1 to 2 sprays are usually sufficient for standard monitors. If the screen is too wet, it will be difficult to buff dry.
- **Buffing is Essential:** Do not skip Step 4! Flipping the cloth to the dry side to buff away the moisture is the key to a streak-free finish.
